Section 5 – Emergency Response Planning.....Page 7

Section 1 - Policy Statement

The intent of this emergency plan is to ensure the safety of consumers and the protection of life, property and the environment in the most efficient way possible in the event of an unexpected incident. In particular, this plan deals with events that may affect water quality. The Village of Canwood Waterworks Emergency Response Plan will contain documentation on the organizational responsibilities, emergency management and planning procedures, notification and communication, and action plans to follow in the event of an unexpected waterworks incident. The performance goals and acceptable levels of service are outlined below.

Goals

Goal 1: Life Safety

The primary goal in an emergency situation is to ensure the safety of all water system users and emergency response personnel. At all times, water being provided to the public must be safe and clean. Interventions to restore safety in the event of the failure of the distribution system, distribution of contaminated water, release of hazardous materials or collapse of vital structures must be undertaken as soon as is practically possible.

Goal 2: Fire Suppression

Water for fire suppression should be made available as soon as possible after a disaster or emergency.

Goal 3: Public Health Needs

Water is essential to life and health; however, some needs are more immediate than others. For instance, care homes and emergency shelters require a continuous supply of potable water. Notwithstanding safety and fire objectives, in the event of a water emergency, water service will be restored as soon as is reasonably and practically feasible within the economic limitations determined by Council.

Section 2 - Waterworks Emergency Response Contact List

Telephone contact numbers for parties who may need to be contacted in the case of a waterworks emergency are listed in **Table 1** below.
